

Imagine your future

and make it real with us.

Role: Software Engineer

Cohort: root_<mind>

Capgemini Exceller program is a premium early-career talent initiative designed to hire high-potential technical graduates from leading engineering institutions.

Choosing Capgemini means choosing a company where you will be empowered to shape your career in the way you'd like, where you'll be supported and inspired by a collaborative community of colleagues around the world, and where you'll be able to reimagine what's possible.

At Capgemini we believe the next generation of engineers will not simply build software. They will build intelligent systems, AI-powered solutions, digital platforms, and transformative experiences that redefine the way organizations operate.

Join us and help the world's leading organizations unlock the value of technology and build a more sustainable, more inclusive world.

Your Role:

- Champions modern software engineering and leverage AI-assisted engineering tools and emerging technologies, engineering best practices, and automation to design, develop, test, and continuously improve high-quality software solutions
- Apply strong problem-solving skills, data structures, algorithms, design patterns, and software engineering principles to build scalable, reliable, and maintainable applications.
- Optimize solutions for performance, scalability, security, and reliability
- Contribute to AI, Cloud, Platform Engineering, Data & Enterprise Transformation initiatives.
- Deliver enterprise-scale software and AI-powered solutions as a key technical contributor.
- Shapes technical strategy, aligns engineering decisions with product road maps, business goals, drives innovation, engineering excellence, and continuous improvement.
- Collaborate with multidisciplinary teams across global delivery environments.
- Continuously build expertise through learning programs and certifications.

Your Profile:

- Possesses software engineering proficiency and AI engineering expertise to solve complex business and technology challenges.
- Sound analytical & problem-solving skill. Proficiency in at least one programming language
- Knowledge of Java, Python, .NET, JavaScript, React, Angular, Node.js, or similar technologies. Understanding of databases, APIs, and application development concepts.
- You should possess strong communication skills for effective interactions with project partners. You should demonstrate good interpersonal, and collaboration skills

- You should be willing to skill-up in multiple technologies, open for varied roles, work in any Capgemini / Capgemini's Client location and travel as required.
- You should be flexible to work across different shift schedules, including night shifts, depending on operational and project demands
- You should be able to work independently, take initiative and manage a variety of activities concurrently

Eligible Streams: BE / BTECH (CS/IT, Circuit & allied branches)

Preferred Exposure

Experience through projects, internships, certifications, hackathons, or self-learning in:

AI & ML | Gen AI | Cloud Computing | DevOps & Automation | Full-Stack Development | Data Engineering | Cybersecurity | Platform Engineering | API Development

What Will Differentiate You

Technical innovation projects | Open-source contributions | Research publications | Cloud or AI certifications | Hackathon achievements | Strong problem-solving capability | Demonstrated leadership or initiative

What We Value

Curiosity and continuous learning | Innovation mindset | Collaboration and teamwork | Ownership and accountability | Customer-centric thinking | Adaptability and resilience | Responsible use of technology and AI

Potential Future Pathways

- **Forward Deployed Engineer:** Work closely with clients to frame problems, rapidly prototype, customize, and deploy solutions.
- **AI Native Engineer:** Design AI-powered applications using Generative AI, machine learning, LLMs, RAG, and agentic frameworks.
- **Platform Engineer:** engineer cloud-native platforms, APIs, microservices, automation pipelines, and developer platforms.
- **AI-Augmented Quality Engineer:** Create intelligent testing and quality solutions that strengthen reliability, security, and trust.

What you will love about working here:

- A work environment recognized by Ethisphere as one of the World's most Ethical companies
- A culture anchored in our Fun and Team spirit values
- Open access to digital learning platforms, advanced certifications and learning pathways.
- Award winning career acceleration programs.
- Work on next-generation AI and engineering programs.

About Capgemini:

Capgemini is the business transformation partner for enterprises in the age of AI. We help organizations imagine and build an intelligent, sustainable future, combining AI, technology, and human ingenuity to transform how they operate, innovate, and grow. With unique end-to-end capabilities spanning strategy, technology, engineering, and intelligent operations, we bring together deep industry expertise and market-leading capabilities in AI, cloud, and data to turn ambition into measurable business outcomes at scale. Supported by a robust ecosystem of partners and nearly 60 years of expertise, Capgemini is a responsible and diverse global organization of over 410,000 team members in more than 50 countries. The Group reported 2025 revenues of €22.5 billion.
